

Table 1
Los Angeles County Health Hazard Events That We Reviewed

	CHIQUITA CANYON LANDFILL	ALISO CANYON	CITY OF PARAMOUNT	CITY TERRACE	EATON AND PALISADES WILDFIRES
Community or Region	Val Verde Castaic Hasley Canyon	Porter Ranch	Paramount	City Terrace in East Los Angeles	Altadena Pasadena Pacific Palisades Malibu
Concern That the Community Would Be Exposed to Chemicals Present in ...	Air	Air and oily residue	Air and soil	Air and soil gas	Air and soil
Primary LADPH Response Years*	2023–ongoing	2015–2016	2016–2019	2019–2023	2025–ongoing
What Happened	A chemical reaction at the landfill caused increased landfill emissions.	A natural gas storage well leak caused methane and other chemicals to be released into the community.	Emissions from industrial facilities led to high chromium 6 levels in the air and deposition onto nearby soils.	LADPH conducted an investigation into concerns about landfill-related pollutants and emissions from long-closed landfills.	Wildfires burned approximately 37,000 acres and 16,000 structures.
Entities Involved	Chiquita Canyon, LLC	Southern California Gas Company	Multiple businesses	Crown Enterprises; Bar V Bar; and Los Angeles County	Not Applicable

Source: Auditor research and review of publicly available background material about these events.

Note: This table is not intended to convey details about the severity of these events, but rather to present background information.

* Although other agencies may have participated in response activities before or after the years indicated, we determined that these were the years when LADPH was primarily involved in actively responding to these events.
