

Table 1
Utilities Spent Most Ratepayer Funds in 2022 on Resource Acquisition Programs
(in Millions)

Efficiency Program Segment	PG&E	SCE	SOCALGAS	SDG&E	TOTAL
Resource Acquisition	\$107	\$64	\$67	\$22	\$260
Market Support	36	20	13	10	79
Equity	3	1	5	0.2	9
Codes and Standards	35	15	1	4	55
Evaluation Measurement and Verification	10	7	0.4	3	21
Totals	\$192	\$106	\$87	\$39	\$425

Segment Definitions

Resource Acquisition: Programs that achieve measurable energy savings, such as a program that directly installs energy-efficient products, like a SMART thermostat, for program participants.

Market Support: Programs that educate program participants, train contractors, build partnerships, or move beneficial technologies towards greater cost-effectiveness. A program that provides marketing support to help home builders and sales agents effectively communicate the value of a home’s energy-efficient features to potential homebuyers.

Equity: Programs that provide energy efficiency improvements to hard-to-reach and underserved program participants and disadvantaged communities. Such a program could include educating communities about a utility’s services and making referrals to energy savings assistance programs.

Codes and Standards: Programs that influence standards and code-setting bodies, such as the California Energy Commission, to strengthen energy efficiency regulations and improve compliance with existing regulations.

Evaluation, Measurement, and Verification (EM&V studies): Among other objectives, programs that evaluate the performance of utilities and third-party implementers, verify energy savings, and support the design and improvement of future efficiency programs.

Source: CPUC decisions, energy efficiency policy manual, and data.

Note: Totals may differ slightly due to rounding.
