Note: Totals may differ slightly due to rounding. An efficiency program that results in positive electric energy savings may inadvertently lead to an increase in natural gas usage. Consequently, this efficiency program reports its natural gas energy savings as negative.

\* The 2016 efficiency program data represent utilities' claimed energy savings without independent verification. For the remaining years, the CPUC had an independent consulting firm evaluate utilities' claimed energy savings for accuracy but did not verify 100 percent of the data.
