

Table 9**CDCR and CIM Have Fully Implemented Most of the OIG's Recommendations Resulting From the 2009 Riot at CIM**

OIG RECOMMENDATION	STATUS
The OIG recommends that CDCR:	
Proceed with its plans for changing RC West's mission so that it no longer houses reception center inmates, given its current open dormitory design. Even if the department changes the mission, the Office of the Inspector General questions the future use of RC West's dormitories to house the number of inmates (1,300) they held prior to the riot. Therefore, while we support the change in mission, if CDCR decides to house such numbers of inmates in these dormitories, we also recommend that it identify and complete all security and staffing modifications necessary to house those inmates safely.	FULLY IMPLEMENTED
Ensure that emergency operation plans for CIM and all other prisons provide adequate housing, food, clothing, medical attention, and other essential services to large numbers of inmates who may be displaced by major events such as riots or natural disasters.	FULLY IMPLEMENTED
Share critical lessons from the CIM riot that have universal application to the State's other prisons to help them improve their own emergency operations plans. Universally applicable lessons from the CIM riot include <i>information on identifying inmates who no longer have ID cards</i> , and information on identifying medical facilities with capacity to accept inmate patients.	PARTIALLY IMPLEMENTED
The OIG further recommends that CIM:	
Establish emergency operation procedures to assure that the institution can summon a sufficient number of trained and properly equipped peace officers to transport or escort injured inmates to outside medical care facilities.	FULL IMPLEMENTED
Provide for direct communication between its Emergency Operations Center (EOC) and community emergency service agencies by obtaining compatible radios and radio frequencies or having representatives of key agencies present in the EOC.	FULLY IMPLEMENTED
<i>Obtain field-deployable equipment capable of rapidly identifying inmates who have become separated from their ID cards. Such equipment should be capable of using any combination of fingerprints, iris scans, or facial photos.</i>	PARTIALLY IMPLEMENTED
Establish in emergency protocols a means to access the data system that shows real-time availability and location of local hospital beds to enhance efficient transfer of injured inmates.	FULLY IMPLEMENTED
Develop procedures and contingencies for fire suppression activities in the vicinity of a lethal electrified fence.	FULLY IMPLEMENTED
During emergency response training, emphasize the importance of establishing a tactical command post near the emergency scene and of respecting the chain of command established by the Emergency Operations Plan.	FULLY IMPLEMENTED
